

PHAN DUY LONG

Intern

Ho Chi Minh | Phone: 03989 17 423 | phanduylong708@gmail.com | Linkedin | github.com/Phanduylong708 |

Education

University of Greenwich Graduated: 2026
Bachelor of Science in Computer Science GPA: 3.4

English Proficiency Certificate
VSTEP B2

Relevant Experience

Odyssey Software Company 08/2026 – 11/2026
Frontend Developer Intern Ho Chi Minh

- Developed responsive web pages for an online education platform using React, JavaScript, HTML, CSS, and Figma designs, enabling students to easily find and browse courses across all devices.
- Built cart and user authentication workflows by integrating RESTful APIs and leveraging Claude AI to accelerate development, helping users sign in securely and buy courses in a few clicks.
- Collaborated within an Agile engineering team using Jira to prioritize tickets and incorporate founder feedback during weekly meetings to deliver features on schedule.

FPT Software 05/2026 – 08/2026
Mobile Developer Intern Ho Chi Minh

- Built a cinema ticket booking app using Kotlin, RESTful APIs, and applied OOP principles, enabling users to select seats and buy tickets quickly on the phone.
- Worked with a team of 4 developers in daily coding, utilizing Git and GitHub to submit pull requests and received senior feedback to fix bugs before merging.

Projects

Webchat – Fullstack | Demo: my-webchat.duckdns.org | Source: github.com/Phanduylong708/webchat

- Automated website deployment using Docker and CI/CD on AWS EC2, cutting update time from 30 minutes to 3 minutes to release faster.
- Built a chat web using React, Typescript, PostgreSQL, allowing users to add friends, chat, video call in real time
- Developed chat and calling features using Node.js, Express, Socket.IO, with cursor pagination to efficiently load large message histories and maintain consistent call sessions without stale connections.
- Used Zustand and TanStack Query to cut re-renders and redundant API calls on reconnect; added optimistic updates so sent messages appear immediately, reducing 90% delay from UI
- Cached session data in Redis to eliminate significantly repeated authentication lookups and added Redis-based rate limiting with INCR/TTL to prevent message spam.
- Implemented WebRTC peer-to-peer connections for video and screen sharing, routing media directly between clients to avoid server relay and keep call latency low.

Technical Skills

Language: Javascript, TypeScript, HTML, CSS
Frontend: ReactJS, TanStack Query, Zustand, TailwindCSS, WebRTC
Backend: NodeJS, ExpressJS, Socket.io, PostgreSQL, Prisma ORM, Redis
